

Identity

Identity provides you with all of the accounts the end-user granted your application access authorization along with beneficial owner identity information for each of them. Beneficial owner information is attached to each account as it's possible the end-user is not the beneficial owner, e.g. a corporate account, or there is more than one beneficial owner, e.g. a joint account the end-user shares with their partner.

Properties

`type` string

`person`, `organization` or `unknown`.

`names` array

An array of `name` objects with the following shape: (can be an empty list)

`type` string

`name` or `alias`.

`data` string

Name of the person or organization.

`addresses` array

An array of `address` objects. Can be an empty list.

`primary` boolean

Indicates if this is the owner's primary address (in case multiple addresses are provided).

`street` string

The street address.

`city` string

The name of the town or city.

`region` string

The state or region. For US addresses it's a 2-letter uppercase state code, e.g. "AL".

`postal_code` string

The zip or postal code. For US addresses it can be a 5-digit ZIP code or a ZIP+4 code: 5 and 4 digits separated with a hyphen.

`country` string

The ISO 3166-1 alpha-2 2-letter country codes, e.g. "US".

`phone_numbers` array

An array of `phone_number` objects with the following shape: (can be an empty list)

`type` string

`mobile`, `home`, `work` or `unknown`.

`data` string

The phone number digits only or prefixed with a "+" if in an international (E.164) format.

`emails` array

An array of `email` objects with the following shape: (can be an empty list)

`data` string

GET /identity

Get Identity

Returns an array of accounts with beneficial owner identity information attached. Each item in the list is an object of the following type:

Properties

account object

An **account** object. See the [documentation](#) for type information.

owners array

An array of identity objects of the type defined [above](#).
